VI Phytoplankton Culture for Aquaculture Feed

feeds in aquaculture Phytoplankton are cultured to feed bivalve molluscs (all life stages), the early larval stages of crustaceans, and the zooplankton (eg, rotifers, cope-pods) that are used as live food in fish hatcheries Flagellates and diatoms are two important types of phytoplankton at the base of the food chain They manu-

Growing microalgae as aquaculture feeds on twin-layers: a ...

live microalgae feeds, numerous nonliving diets of algal or nonalgal origin have been tested over the years (Hemaiswarya et al 2011) However, in most cases, non-living diets can only partially replace live microalgae as feed in aquaculture (Aji 2011) Live microalgae thus re-main an integral part and the first choice in marine aqua-
